## Silver Street, Cheltenham – Proposed Traffic Measures

### Background

In March this year, Council consulted residents regarding the below proposed traffic management measures in Silver Street, Cheltenham.

Proposed traffic management measures:

- Installation of three flat top speed humps (see attached plan), with one being installed at the existing school crossing between Ramsay St and Lorna St.

Feedback from residents showed a high level of support for the proposed measures which will address community concerns about high traffic speeds and road safety.

The measures will therefore be installed, with one minor change. Due to engineering constraints the proposed raised pavement near the intersection of Coolac Street will be changed to speed cushions. Construction is scheduled for March 2020 and Council will provide a further update closer to the start of the works.

Thank you for participating in the community survey.

### Further Information

For further information please contact Traffic Engineer Corey Allen on 1300 653 356.
