

Attracting frogs to your garden

Frogs need water to lay their eggs and for tadpoles to grow into frogs. Tadpoles feed on algae and decaying vegetable matter. Frogs spend their non-breeding life away from water and eat insects.

Habitat tips:

- locate your pond in a low-lying section of your garden that has 70% shade
- avoid locating your frog pond under trees that drop leaves
- ensure your pond includes shallow entry points and deeper sections for potted aquatic plants
- add rocks and logs and cover the bottom with gravel
- fill with rainwater or tap water (chlorinated tap water needs to stand for at least 24 hours).
